# ROMANIAN ASSOCIATION OF BUILDING SERVICES ENGINEERS

This year's edition of the Conference is dedicated to restoration, conservation and modernization of the Heritage Buildings, which must assure an untainted transfer of the cultural values, related to the needs of the modern society and in a perfect harmony between classic and contemporary.

The National Cultural Heritage represents an important factor in maintaining the identity of national cultural values.

In terms of direct material values, the Heritage Buildings are the most valuable component of the cultural heritage.

According to some recent studies, 30% of Heritage Buildings are in danger, while 35% are already depreciated, most of them being irremediably affected.

The fight for the conservation of Heritage Buildings, through protection and restoration, has started to be an increasing concern for our society.

From the beginning till the end of the restoration of these buildings, it is also necessary to restore and provide building services specific to each type of destination.

The main theme of the Conference consist in establishing some directions and proposing solutions, equipment, technologies and legislative regulation, adapted to each situation, but which does not affect the historical, artistic or architectural values of the Heritage Buildings.
